

FORM-FILL

Autofill Website Forms to Help Increase Conversions

Streamline Online Data Entry with Form-fill

Are your customers abandoning form submissions on lengthy website forms? First-name, last-name, address, city, state, zip-code, home phone, work phone, cell phone, the list goes on. Although this type of information is typically required for many online or digital transactions, it's still a common pain-point in many companies' digital experience.

Consumers want a fast, safe and most importantly, easy experience when enrolling, registering or making a purchase through your website. But if they get bogged down by lengthy forms that take precious time to complete, you run the risk of mounting frustration and an abandoned application. What if there was a better way?

THE SOLUTION: FORM-FILL

With just your customer's telephone number, Form-fill auto-populates their personal information into applicable website fields. In doing so, this service has the ability to help increase conversion rates, while at the same time reducing potential errors caused by manual input.

HOW IT WORKS

With your customers' consent and verification, our Form-fill product utilizes trusted sources, such as Mobile Network Operator data, to populate their personal information and enter it into the website form for the customer – automatically.

Your customers will appreciate the quick and easy process making registration a breeze, while at the same time decreasing friction, reducing errors and improving the overall customer experience – a win-win. Let us show you how Form-fill can take your business and digital experience to the next level.

FORM-FILL SUPPORTS THE FOLLOWING USE CASES:

- Digital account applications
- Online registrations
- New account enrollments
- Online shopping carts
- General data entry fields

BENEFITS OF FORM-FILL

Leverage this solution as a standalone capability or integrate it into the various use cases mentioned above to:

- Achieve higher conversion rates
- Streamline online application and registration forms
- Reduce fraud through pre-verified and trusted sources
- Reduce manual input errors
- Improve the customer experience
